

The Geologic Column and the Evolution of Life *(read from bottom to top)*

EON	ERA	PERIOD	EPOCH	AGE (millions years ago = ma)	LIFE FORMS/EVENTS	GEOLOGIC EVENTS
Phanerozoic	Cenozoic (age of mammals)	Quaternary	Holocene	0.01	modern humans	<i>End latest Ice Age</i>
		Pleistocene		2.5	earliest humans	<i>Begin latest Ice Age</i> <i>Linkage of N & S Americas</i>
Tertiary		Pliocene		5.3		<i>Begin Cascade volcanism</i> <i>Begin Antarctic icecaps</i>
	Miocene		23.7		earliest hominids	
Oligocene			36.6		Mammals abundant flowering plants abundant	<i>Collision of India w. Asia</i>
Eocene			57.8		earliest grasses mammals, birds, insects abundant	<i>Separation of Australia & Antarctica</i>
Paleocene			65			<i>Formation of Alps</i> <i>Opening Norwegian Sea & Baffin Bay</i> <i>Formation of Rockies</i>
<hr/>						
Cretaceous-Tertiary boundary: extinction of dinosaurs and many other species at end of Mesozoic Era (65 million years ago)						
Mesozoic	Cretaceous (age of reptiles)			144	first flowering plants (115 ma) first birds (155 ma) dinosaurs abundant	
Jurassic				199		

Begin breakup of Pangea

first turtles (210 ma)
first mammals (221)
first dinosaurs (228 ma)
first crocodiles (240 ma)

Permian-Triassic boundary: greatest mass extinction of all time; 96% all life on Earth perishes at end of Paleozoic Era (251 ma)

Paleozoic (ancient life)	Permian	end of Permian = extinction most marine & land animals (age of amphibians)	S. Hemisphere glaciation <i>Finally assembly of supercontinent Pangaea</i>
Carboniferous			
Pennsylvanian	325	large coal swamps	<i>Formation of coal deposits</i>
Mississippian	360	first reptiles (330 ma) amphibians abundant	
Devonian	408	first seed plants (365 ma) first sharks and bony fish (370 ma) first insect fossils (385 ma)	
Silurian (age of fishes)	438	first land animals (410 ma) first vascular land plants (430 ma)	
Ordovician	500	first moss-type land plants (470 ma) first fishes (505 ma) earliest corals marine algae	

Pre-Cambrian	
Cambrian (age of invertebrates)	545
first invertebrates (550 ma)	trilobites dominant first abundant life (shelled invertebrates) “Cambrian Explosion”
earliest shelled organisms (600 ma)	<i>Breakup of Rodinia (750-600 ma)</i>
first fossil of multicellular organism (1200 ma)	<i>Snowball Earth (700 ma)</i> <i>Formation of early supercontinent Rodinia (1200 ma)</i>
first fossil of eukaryote cell (1800 ma) free oxygen in atmosphere (2400 ma)	<i>Snowball Earth (2200 ma)</i>
first evidence of eukaryote byproduct, cholesterol (2700 ma)	
stromatolites abundant (3500 ma)	
earliest primitive life (prokaryotes - bacteria) (3800-3500 ma)	
oldest surface rocks (4000-3800 ma)	
oldest single mineral, zircon (4400 ma)	<i>Heavy meteorite impacts</i>
oldest Moon rocks (4440 ma)	
oldest meteorites (4560 ma)	<i>Formation of Earth</i>
Hadean
